

Keeping Idaho and Eastern Oregon Clean and Green

Viking 110 Heating Coil Descaler:

A concentrated crystalline powder that mixes completely with water to descale high pressure washer heating coils.

Our 8 lb. jar will make four 5 gallon buckets which can be used twice for de-scaling pressure washer heating coils.

The best way to descale is with a separate pump. Hook the inlet of the acid pump to discharge side of the hot pressure washer outlet. Complete the loop by re-circulating the acid coming out of the pressure washer to the acid supply container. Allow to recycle in this fashion for up to 4 hours. Save the acid mixture for a second use later on when needed.

RM-110 can be run through your pressure washer using the pressure washers own high pressure pump. Our powder acid will not damage the pump.

Added corrosion inhibitors leave a protective coating layer increasing the life of your heating hot pressure washer heating coils.
