Hydro Tek Distributor Marketing Bulletin

June 2013

NEW – Water / Flood Recovery & Evacuation System

The RPV Hydro Vacuum® is a water capture and transfer system. It transfers the water while vacuuming, eliminating the inefficient task of having to continually dump your collection tank. The new RPV is ideal for flood and fire restoration contractors because of the large volume of water that can be removed. It is also useful for anyone wanting to eliminate water runoff at a job site or a pressure washer contractor collecting wastewater. In addition, the RPV is able to discharge vertically. (Requires 2" diameter vacuum hose, 2" diameter discharge hose recommended)

A building service contractor or auto detailer will like the additional feature to turn the RPV into a high powered shop/detail vacuum just by adding the optional dry work filter.

30 gallons per minute, Model# RPV30E1, 115v – 15amp or 3500w generator

50 gallons per minute, Model# RPV50E1, 115v – 20amp or 5500w generator

Wheel kits: Caster kit (#AHS07)

Dolly kit (#AHS06)

NOTE: These two new RPV models replace the RPT5E1, RPVACE1, RPVRE1, and RZF5E1 which will be discontinued.

Additional information and video are available at <http://www.hydrotek.us/pr/news.htm> or contact the Inside Sales Department at (800) 274-9376 x3

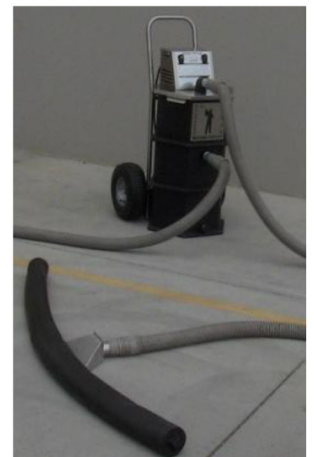

Easy to use, lighted vacuum switches control vacuum & pump out functions.

If your customer wants portability, choose one of the wheel kit options for indoor or outdoor use: dolly style or casters

The RPV includes a lift out basket strainer to protect the pump by collecting large debris

Shown with optional scupper, berm, vacuum hose & discharge hose
